# Solar panels made

## Overview

---

Solar panels are made by connecting solar cells in a series, encapsulating them in protective materials, adding a frame for support, and covering the front with glass to protect the cells from environmental damage. Where are solar panels made?

Based in Tajpur, Sabarkantha, Gujarat, the company manufactures both monocrystalline and polycrystalline solar panels at its 25,375-square-meter, 200 MW-capacity manufacturing facility. The distinction between these lies in their solar cell composition, affecting efficiency and appearance.

How are solar panels made?

The process starts with extrusion, where aluminum is pushed through a die to create the bracket's shape. This method allows for intricate profiles and adjustable features. The brackets are designed to accommodate the specific dimensions and angle requirements of the solar panels.

Where are Panasonic solar panels made?

Panasonic solar panels are manufactured in the U.S. and Malaysia, while Mission Solar is manufactured strictly in the U.S. Jinko Solar, a less expensive solar panel company than Panasonic or Mission Solar, manufactures their solar panels in China. While another lesser-known company, Candian Solar, manufactures its panels in Canada.
