Solid-state energy storage lithium battery cost

Overview

Currently, solid-state batteries cost between \$400-\$600 per kWh, with some estimates predicting a drop to \$150-200 per kWh by 2030 and as low as \$100 per kWh thereafter. However, challenges in mass production and material costs keep prices high for now.

In this work we describe the development of cost and performance projections for utility-scale lithium-ion battery systems, with a focus on 4-hour duration systems. The projections are developed from an analysis of recent publications that include utility-scale storage costs. The suite of.
