## Overview

---

What is battery energy storage in South Africa?

In South Africa, Battery Energy Storage is a key aspect of the first-of-its-kind hybrid project, Oya. Straddling the Western and Northern Cape Provinces, the hybrid facility will offer 86MW wind and 155MW Solar PV dispatchable power, coupled with 92MW/ 242 MWh battery energy storage.

Does South Africa have a battery storage tender programme?

South Africa is aiming to procure utility-scale battery storage with two tender programmes: its Battery Storage IPP Procurement Programme as well as hybrid battery storage and variable renewables projects through its Risk Mitigation IPP Procurement Programme.

What is the outlook for South Africa's Energy Future?

So far, the outlook is good: renewable sources now generate over 8% of South Africa's electricity, and the government last year announced a bid window to add almost 15,000 MW of further renewable capacity, which should help put an end to recurrent power shortages.

Can South Africa decommission a coal-fired power plant?

This project aims to decommission one of South Africa's oldest coal-fired power plants and replace it with 220 MW solar PV and wind power, as well as 150 MW battery storage. The funding comprises significant amounts of highly concessional financing.

Can South Africa halve the cost of solar and wind energy?

In answer, South Africa has launched a series of trailblazing green projects designed to tap its abundance of renewable energy sources, including the first concentrated solar power plants in Africa, and a fiercely competitive procurement program that has helped to halve the cost of solar and wind energy in just three years.
