South Korea s smart energy storage system

Overview

Enter KEPCO's Battery Intelligence Management System (BiMS) and Sungrow's EMS3000, two innovations that are redefining how energy storage systems (ESS) operate—and why investors should take notice. Are South Korean companies investing in energy storage systems?

Less than a decade ago, South Korean companies held over half of the global energy storage system (ESS) market with the rushed promise of helping secure a more sustainable energy future. However, a string of ESS-related fires and a lack of infrastructure had dampened investments in this market.

What is Gyeongsan substation - battery energy storage system?

The Gyeongsan Substation - Battery Energy Storage System is a 48,000kW lithium-ion battery energy storage project located in Jillyang-eup, North Gyeongsang, South Korea. The rated storage capacity of the project is 12,000kWh. The electro-chemical battery storage project uses lithium-ion battery storage technology.

Why should South Korea deploy long-duration storage?

Deploying long-duration storage will allow Korea to capture surplus renewable energy during these off-peak periods and shift it to peak demand hours, reducing curtailment and maximizing asset utilization. This tender fits within South Korea's broader decarbonization roadmap.

What is Nongong substation energy storage system?

The Nongong Substation Energy Storage System is a 36,000kW lithium-ion battery energy storage project located in Dalsung, Daegu, South Korea. The rated storage capacity of the project is 9,000kWh. The electro-chemical battery storage project uses lithium-ion battery storage technology.

Which ESS batteries are most popular in South Korea?

One of the key alignments is the predominant focus on electrochemical-based

ESS, particularly lithium-ion batteries. This emphasis reflects the market reality that, lithium-ion batteries account for over 90 % of the ESS market in South Korea excluding pumped-storage power generation .

Why is South Korea launching a 540mw battery energy storage tender?

South Korea is ramping up its battery energy storage deployment with a new 540MW tender to stabilize the grid and support renewable energy growth. Learn how this move strengthens both domestic resilience and global market leadership.
