Overview

Where does Sudan's electricity come from?

Most of Sudan's electricity generation comes from hydropower, and more than half of the Eastern African region's total oil-based capacity is located in the country. Sudan is also contemplating scaling up projects on solar power in the coming years.

What are the main sources of energy in Sudan?

The main source of energy which are applicable in Sudan for rural now are solar, wind and biomass for small power supplies for households, rural electrification, communications and special applications, health centres, potable water and irrigation. Sudan is in the process of developing its comprehensive energy policy .

Are there any energy saving programs in South Sudan?

Regarding energy conservation, there are no known programs or projects in South Sudan. However, South Sudan has high potential for renewable energies to generate electricity, including small-scale and large scale hydropower, solar photovoltaic, and wind, biomass, geothermal and waste-to-energy.

Is there a program for promoting modern energy in South Sudan?

South Sudan has great potential for development of energy consuming nodes in rural areas such as agro-processing, carpentry, hair salons and other SMEs. However, there is no known program for promotion of modern energy for productive use in South Sudan.
