

## ContainerPower Energy Solutions

# The cost of sodium battery energy storage power station

## Overview

---

Currently, pricing for sodium-ion batteries tends to range from \$100 to \$300 per kilowatt-hour. This price spectrum indicates flexibility based on several factors, including battery capacity, cycle life, and energy density.

Currently, pricing for sodium-ion batteries tends to range from \$100 to \$300 per kilowatt-hour. This price spectrum indicates flexibility based on several factors, including battery capacity, cycle life, and energy density.

The system can offer at least \$1 million in annual operational cost savings per gigawatt hour installed. The system can deliver 33% reduction in battery degradation over a 20-year project lifespan. Peak Energy A New York-based company has delivered the first grid-scale, sodium-ion battery storage.

Sodium battery energy storage systems are primarily influenced by three crucial factors: the cost of raw materials, production technology, and market demand. 2. The average price of sodium-ion batteries currently ranges between \$100 to \$300 per kilowatt-hour, depending on various technological and.

Sodium-ion batteries are more cost-effective but have lower energy density and shorter lifespans. Larger projects often benefit from economies of scale. As capacity increases, the cost per unit of energy storage typically decreases due to reduced equipment and construction costs per kilowatt-hour.
