The price of solar panels does not include tax

Overview

Based on 2025 data from the Solar Energy Industries Association (SEIA) and Department of Energy benchmarks, you're looking at \$2.53 to \$3.15 per watt for residential solar installations before any tax credits kick in. What does this mean for your home?

Based on 2025 data from the Solar Energy Industries Association (SEIA) and Department of Energy benchmarks, you're looking at \$2.53 to \$3.15 per watt for residential solar installations before any tax credits kick in. What does this mean for your home?

That price effectively drops to \$19,873 after considering the full federal solar tax credit. NOTE: Under the "One Big Beautiful Bill Act" signed in July 2025, the federal solar tax credit is now set to expire at the end of the year, much earlier than previously expected. You must install and pay.

The Residential Clean Energy Credit equals 30% of the costs of new, qualified clean energy property for your home installed anytime from 2022 through 2032. The credit percentage rate phases down to 26 percent for property placed in service in 2033 and 22 percent for property placed in service in.

The average cost to install solar panels before tax credit is approximately \$29,360 for an 11 kW residential system in 2025, ranging from \$2.53 to \$3.15 per watt depending on your location and system specifications. Quick Cost Reference: Solar installation costs have dropped dramatically over the.

The solar tax credit has been a boon to homeowners who want to invest in solar panels. Many of our members have told us how adding solar has allowed them to lower their electric bills or even bring those bills down to zero. But if you're thinking about going solar and leveraging the federal tax.
