

## ContainerPower Energy Solutions

# Vietnam High Temperature Solar System

## Overview

---

Why is Vietnam focusing on solar energy?

It was followed by wind energy, which produced 11.4 million kWh (4.1 percent), and biomass, which generated 853 million kWh (0.3 percent). Vietnam's strategic focus on solar energy not only addresses environmental concerns but also supports the nation's economic development and energy security.

Why should foreign investors invest in solar energy in Vietnam?

Vietnam's solar energy market, driven by high solar potential and strong government support, plays a key role in the country's "Net Zero" commitment, among other fields of green energy. For foreign investors, this presents a golden opportunity to tap into a rapidly growing sector with sustainable impacts.

How much solar energy does Vietnam produce a year?

On average, the solar radiation ranges from 1,300 to 2,900 kWh per year, increasing towards the southern regions. This article examines Vietnam's key policies and models that have played a crucial role in driving the expansion of solar energy.

Is Vietnam a leader in Southeast Asia's solar energy sector?

Vietnam has rapidly become a prominent player in Southeast Asia's renewable energy sector. Over the past three years, the nation has experienced an astonishing surge in solar energy development, transitioning from a negligible presence to a regional leader, exceeding the expectations of many experts.

Is solar energy available in Vietnam?

Solar energy in Vietnam is available and relatively stable throughout the year and broadly spread across the country. In the central and southern provinces, the average sunny days are around 300 days per year. Fig. 3 depicts the map

of solar resources in Vietnam (Anon, .

How does fit affect solar energy development in Vietnam?

FiT mechanisms set a fixed price for solar energy, overlooking regional variations in solar potential. This resulted in underdevelopment of solar PV in northern Vietnam, where solar radiation is low, while leading to overdevelopment in the south-central and southern regions, where solar radiation is high.
