What is flywheel battery energy storage

Overview

A flywheel battery is a mechanical energy storage system that operates by spinning a mass, known as a rotor, at a very high speed. What is the difference between a flywheel and a battery storage system?

Flywheel Systems are more suited for applications that require rapid energy bursts, such as power grid stabilization, frequency regulation, and backup power for critical infrastructure. Battery Storage is typically a better choice for long-term energy storage, such as for renewable energy systems (solar or wind) or home energy storage.

Is flywheel energy a good alternative to battery storage?

Renewable energy is knocking on flywheel energy's door. The system can respond instantly, unlike battery storage. However on the downside, flywheel energy storage systems have low energy storage density per unit of weight and volume. Beacon Power operates a 25 kilowatt / 100 kilowatt-hour system in New York.

What is a flywheel energy storage system?

A typical flywheel energy storage system , which includes a flywheel/rotor, an electric machine, bearings, and power electronics. Fig. 3. The Beacon Power Flywheel , which includes a composite rotor and an electric machine, is designed for frequency regulation.

Do power utilities need a flywheel storage system?

Power utilities need innovative ways to store renewable wind and solar energy, during low demand periods, so they can release it after sunset when demand is high. Several innovative power utilities already use flywheel storage systems to maintain power grid frequency. Renewable energy is knocking on flywheel energy's door.

How can flywheels be more competitive to batteries?

The use of new materials and compact designs will increase the specific energy and energy density to make flywheels more competitive to batteries. Other opportunities are new applications in energy harvest, hybrid energy systems, and flywheel's secondary functionality apart from energy storage.

Can a flywheel energy storage system stabilize a power grid?

Anything to do with energy storage attracts us, although a flywheel energy storage system is very different from a battery. Flywheels can store grid energy up to several tens of megawatts. If we had enough of them, we could use them to stabilize power grids.
