

## ContainerPower Energy Solutions

# Which energy storage battery is better in Indonesia

## Overview

---

This report compares two promising LDES families – gravity-based storage (e.g. pumped hydro and lifting-weight systems) and thermal-based storage (heat retention systems) – to determine which is most promising for Indonesia’s energy transition.

This report compares two promising LDES families – gravity-based storage (e.g. pumped hydro and lifting-weight systems) and thermal-based storage (heat retention systems) – to determine which is most promising for Indonesia’s energy transition.

- Resource Endowment: Indonesia's nickel reserves combined with policy frameworks create conditions for battery manufacturing sector development and energy storage deployment.
- Industrial Applications: Primary adoption sectors include manufacturing operations, data infrastructure, electric vehicle.

Indonesia is making significant progress toward renewable energy integration, targeting an ambitious 75 GW addition by 2040. Battery Energy Storage Systems (BESS) are key to stabilizing the grid, managing variable energy sources, and providing power to remote areas. Using battery storage with solar.

The growing EV market will necessitate a robust battery ecosystem, including storage solutions for grid integration and charging infrastructure. Indonesia's focus on industrial growth creates a demand for reliable power. BESS can offer backup power, improve power quality, and enable cost savings.

Hence, the battery energy storage system (BESS) technologies have a critical role in the development of Indonesia’s renewable energy. During the United Nations Climate Change Conference Conference Of Parties (COP) 28 in Dubai, Indonesia joined the BESS Consortium with other countries, including.

Indonesia has recently launched a 5 megawatt Battery Energy Storage System (BESS). The new energy storage system is a device that enables energy from renewables to be stored and then released based on the needs of the

customer. The Battery Energy Storage System is a pilot project and is a concrete.

The need for storage increases from 2030 onwards with capex of electricity storage grows to around USD 82 billion in 2035 and further declines to USD 42 billion in 2050. Started in 2013, provides low-interest loan and ● repayment subsidies. Aims to support private individuals in increasing own.
