Zimbabwe has the largest lithium reserves on the African continent. Lithium has been mined since the colonial period in the 1950s. It's a critical part of rechargeable lithium-ion batteries that are essential for the electric vehicle industry. Globally, the lithium-ion battery market is worth.

Zimbabwe is blessed with some of the world's richest lithium reserves, a resource the world desperately needs to power the clean energy transition. But the real question is this: will Zimbabwe simply export raw lithium and watch others prosper, or will we use this strategic mineral to industrialize.

Zimbabwe to Open First Lithium Sulphate Plant in 2026 Zimbabwe is set to commission its first-ever lithium sulphate plant next year, a move expected to generate an estimated US\$320 million in annual revenue. The milestone project, which underscores the nation's drive towards mineral beneficiation.

"By 2026, Sandawana Lithium aims to supply over 20% of Africa's lithium for renewable battery technologies." The Sandawana lithium deposit stands at the center of Zimbabwe's rising mineral ambitions. As of 2026, the global demand for lithium continues its rapid ascent due to the growing adoption of.

Prospect Lithium Zimbabwe (PLZ) has announced that it will begin construction of a 70-megawatt solar power plant as part of its strategy to strengthen energy security and reduce reliance on the national grid. The project will support operations at PLZ, a subsidiary of China's Zhejiang Huayou Cobalt.
